

Prof. Peter Fristrup was born in Aalborg, Denmark in 1977. He completed his chemistry studies at the Technical University of Denmark (DTU), Lyngby with a Ph.D. in 2006 on selective homogeneous catalysis in asymmetric synthesis under the guidance of Profs. David Tanner and Per-Ola Norrby. After post- doctoral work (2006–2007) with Prof. R. Madsen at DTU and W. A. Goddard III at CalTech (2008) he joined the faculty at DTU as assistant professor in 2009. He was promoted to associate professor in 2012. His current research interests are focused on the use of homogeneous and heterogeneous catalysis for the conversion of biomass to chemical building blocks. In 2016 he joined Dong Energy to work on utilisation of waste materials such as for example wheat straw and household municipal waste.
